

R98 | Unknown clinical status is not early HIV disease

6 reconciled HASP quarters | 4 older partitions quarantined | no epidemic-model promotion

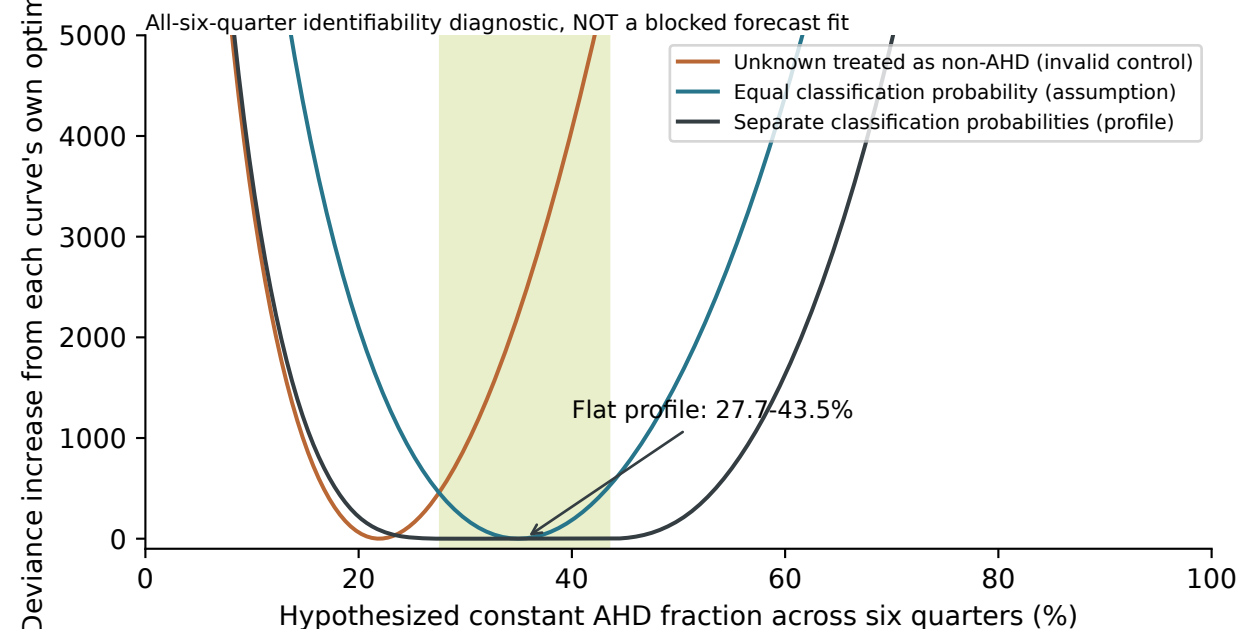

A Missing status varies sharply between reports

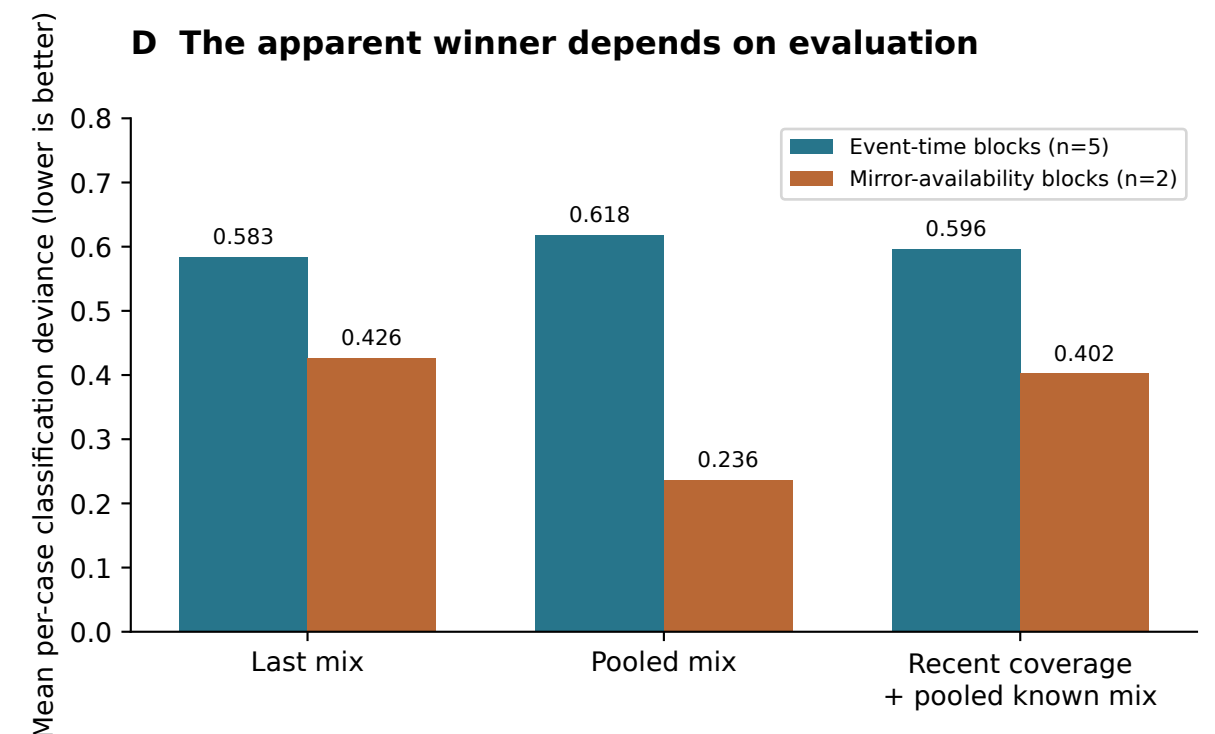

B Known counts imply bounds, not a true fraction

C Changing ascertainment can mimic disease shifts

D The apparent winner depends on evaluation

Source: first-page DOH HASP counts and missing-status footnotes; R97 SHIP metadata. R98, 11 September 2026.
 Known labels assumed correct. AHD definitions remain as reported; AHD does not identify infection duration.
 Panel D predicts classification probabilities conditional on diagnoses, not incidence or total diagnoses. No calibrated interval or causal claim.
